COMMUNITY COLLABORATIVE RAIN, HAIL & SNOW NETWORK

August 2017

We needed the umbrella to protect us from the sun. We needed the umbrella to protect us from the rain. The rain came in July and it did not fall the same on all.

How good are you at typing? Topics that put your typing to use are mentioned. Comments are mentioned. Our feature article uncovers where our Condition Monitoring Reports appear.

Cleanup activity took place last month, closing inactive stations and removing old email addresses from our distribution list. If you're reading this newsletter from an online source and want to be part of the email distribution list, do let us know.

Two recent, very timely and accurate Significant Weather Reports to mention.

No pictures of airplanes this time. As Hurricane season begins to heat up, just a few points to pass on about Hurricane Preparedness. We did receive more Gauge Photos from you. Those pictures at the end.

A new look to how the precip totals at the Climate Sites is shown.

Our Map of the Month is Bristol County RI.

We recognize observers who recently passed 2000 Daily Reports.

2000 Daily Reports

Congratulations to 11 Massachusetts and Connecticut observers who have submitted over 2000 Daily Reports within the past few months.

Those observers are

MA-BA-12	Orleans 1.1 E
MA-BA-19	East Falmouth 0.7 NW
MA-ES-12	Boxford 2.4 S
MA-HS-2	Westhampton 1.8 SW
MA-BA-14	North Falmouth 0.5 ENE
CT-NL-5	Oakdale 2.6 WNW
MA-BA-11	East Falmouth 1.4 ESE
MA-BA-2	Falmouth 3.1 NNW
CT-NH-14	Prospect 1.9 ENE
CT-FR-20	Westport 2.5 ENE
CT-HR-7	Central Manchester 2.7 SW

Going forward, we are going take a section of the newsletter to mention those that recently crossed these multiples of 1000 Daily Reports. Next month, an even longer list of those that crossed 1000 Daily Reports.

Observation Notes - Comments

The summer downpours result in rain that does not fall the same as all. Your report may be unique in some way. Whether it's a trace on a clear day, a few hundredths or one of these 2" + rainfall reports, your report may catch the eye of others.

Without making a Comment, we are left looking at your reported value wondering "Really?" "Is that right?" "Decimal point error?" "Could it be a multi-day report entered as a daily report?" In Southern CT, your reports can catch the eye of the 10AM daily briefing that is held at the New York City/Upton Forecast Office.

Comments that verify and clarify your report can answer all of those questions, the questions by the group who quality check our data, the questions by the rest of us, the questions by anyone else looking at your report, including the NWS.

In early October, Comments will find their way in your Water Year Summary, serving as a narration of your reported measurements. What will your narration be? What will your journal of observations made these past 12 months say? Some of you are journaling your air temperatures. Will you remember your precipitation amounts too?

More about Comments in this <u>video</u>. Some recent examples below.

Significant Weather Reports

Afternoon rains came with high dew points on Wednesday August 2. Timely and valuable Significant Weather Reports were made by two Massachusetts observers.

<u>Date</u> ▲	<u>Time</u>	Station Number	Station Name	<u>Duration</u> <u>Minutes</u>	<u>New</u> Precip in.	<u>Total</u> Precip <u>in.</u>	New Snow in.	Total Snow in.	Flooding	<u>State</u>	<u>County</u>	View
8/2/2017	3:38 PM	MA-HS-7	Plainfield 2.2 SW	60	2.09	2.09	0.0	0.0	Minor	MA	Hampshire	۵,
8/2/2017	4:05 PM	MA-MD-7	Winchester 0.7 SE	30	1.06	NA	NA	NA	Minor	MA	Middlesex	۵,

Plainfield MA. Winchester MA. Two different parts of the state. Two completely different elevations with Plainfield being at nearly 1400' elevation and Winchester at 45' elevation. 2" in an hour. 1" in 30 minutes. Both reports were able to VALIDATE, spot on, the accuracy of the radar estimates. We are reminded by Nolan from the Spring Creek Flood experience that radar estimates are not always accurate and the consequences can be deadly and devastating.

We are not trying to break records with numbers of Significant Weather Reports. We are trying to call attention to Significant events as they occur, and it only takes a minute for your submitted report to alarm a forecaster's screen. The rule of thumb is 1" or more of rain or snow in 1 hour or less.

Be safe while being outdoors. Be timely, accurate and valuable as these observers were. Your report may validate what is occurring. Your report may call attention to what is occurring.

For significant weather, you can provide the ground truth.

Email Deliveries

Cleanup occurred this past month with removing email addresses. If you are seeing this newsletter through the CoCoRaHS sites and NOT through your email box AND would like to be added to our email list, please send a message to Joe joseph.dellicarpini@noaa.gov

In turn, we would like each of you to go through your email box and check your spam folders and white list our email addresses within your email box. The same goes for Nolan and his newsletter. We use email to communicate with each of you and would *not* want our messages to get blocked by your email provider, thinking that our messages or attached newsletters intend to harm your computer.

If you continue to receive our newsletter, messages, and Nolan's newsletter, no action is required.

Hurricane Preparedness

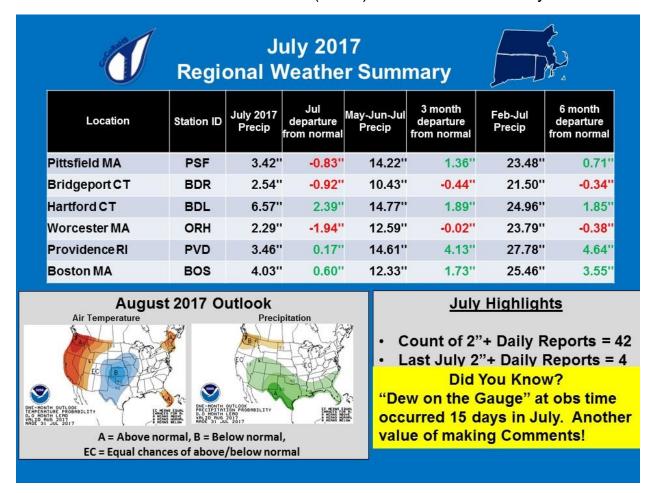

The climax of the Hurricane season is approaching. In mid-July, Hurricane Preparedness Week in Southern New England occurred. A summary of the points made is below.

- f there's a tropical system in the Bahamas, it's your business.
- Important impacts occur in advance of the eye making landfall.
- Mow where you are relative to the expected track of the eye.
- Maximum wind gust potential = maximum sustained winds (+ forward speed if you are to the east) (- forward speed if you are to the west)
- With our New England Hurricanes, the most significant threat is flooding, either inland flooding or storm surge flooding along the coastlines coupled with our tide cycles.

If there's a point here that catches your eye, for further reading the link to all of the details is here.

Detail and Summary for July 2017

From the National Weather Service (NWS) Climate sites for July 2017.

We haven't had a month with these wide ranging precip totals in years.

Widespread rain began the reporting for the month, and then the rains were more localized for northern CT for the 3rd, our new Wallingford CT observers for the 7th, the western part of Cape Cod for the 8th, noted with the NERFC map below, a narrow band in Hartford County CT for the 11th, a few isolated stations in Bristol, Plymouth and Cape Cod for the 12th, eastern CT for the 13th, Washington County RI on the 14th, Hampden County MA, and other isolated stations on the 19th, and many 1" reports from northern CT to Rockport MA for the 25th.

Take in this next section of your reports with appreciation of your efforts.

Accumulated Precipitation (in)

July 01, 2017 to July 31, 2017

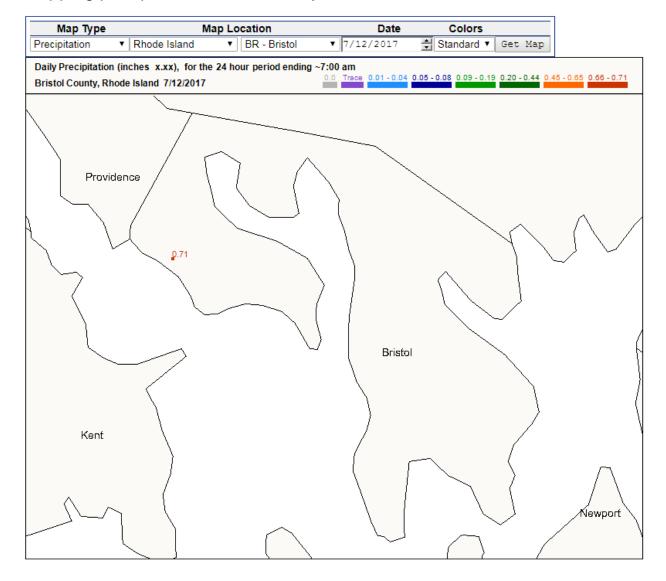

Map of the Month - Bristol County RI

Rhode Island's smallest county is adjacent to a county of the same name in Massachusetts. Bristol County RI is the 3rd smallest county in our nation ahead of a small county in Hawaii and Manhattan Island in New York City.

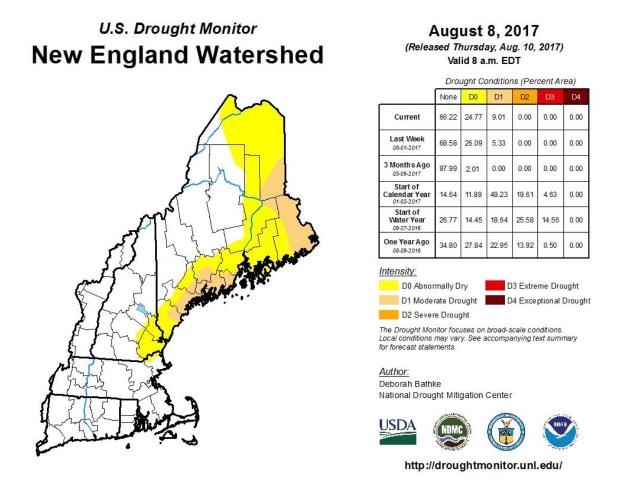

Only 24 square miles of land and 50,000 residents, with historic buildings, mansions, lighthouses, bridges, and plenty of ways to enjoy the rivers and the bays.

In Rhode Island, we would like to have an observer in every town. We have an active observer in Barrington. Let's get one in Bristol and Warren also. If you know of someone who might be interested in measuring and mapping precipitation, ask them to join CoCoRaHS.

From the Drought Monitor.

D0 has returned to Nantucket Island, and is deepening and creeping down the coastline of Maine towards the mouth of the Merrimack River. Every drop counts and zeros do too!

For a viewing explanation on the Drought Monitor, the CoCoRaHS animated video is on YouTube.

You can be a Drought Reporter with Condition Monitoring Reports

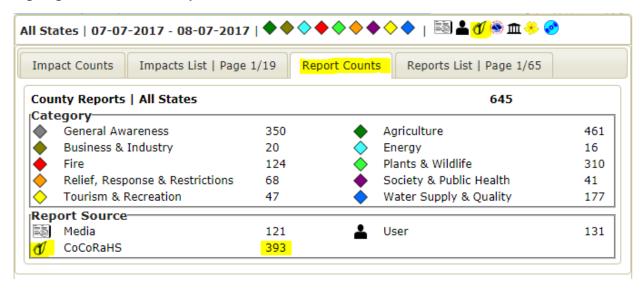

Condition Monitoring Reports are relatively new to us, introduced last October. But where do the reports go? Who would really look at them besides the bunch of us?

The National Drought Mitigation Center (NDMC) at the University of Nebraska in Lincoln begins each and every Monday throughout the year looking to update our nation's drought conditions, state by state, region by region. By Thursday morning, 8:30am eastern time, they publish their US Drought Monitor for all to see. This Thursday update goes into our Monthly Newsletter, which goes to why you see this Newsletter on a Thursday.

There are many items the Drought Monitor looks at to determine drought conditions and the severity of them. River and stream flows, soil and crop conditions, and precipitation totals. Whenever there is uncertainty about what to level to determine for a certain area, your reports get looked at.

Let's look at the Drought Impact Reporter (DIR). http://droughtreporter.unl.edu

This is big. But I see a small CoCoRaHS logo here on the screen. Yellow highlights are made by the editor.

There are "Impacts" and "Reports". It appears that items start in "Reports" and the NDMC staff take the reports that detail the severity to "Impacts"

Φ Refresh Refresh to see results Impacts & Reports Overlays ▼ Scales National Multistate State County City ▼ ■ Impacts Opacity 80% **Impacts** ▶ ✓ Reports ▶ ■ Drought Declarations ▼ Time Period Last Week ▼ Location State: Connecticut County: All Counties

Let's take a look at a Condition Monitoring Report I submitted earlier.

Follow the yellow highlights.

Pick "County" or "City" Other radio buttons were selected and received NO reports.

Select "Reports"

Time Period "Last Week". You can select any time period that satisfies your curiosity.

State. I selected "Connecticut" from the lengthy drop down box of all of our states.

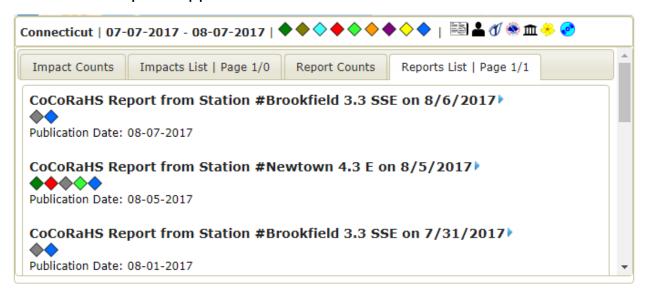

THE MOST COUNTERINTUITIVE part is moving the mouse back to the top and clicking on the green "Refresh" button last, to see results.

On the panel, below the map, should appear the list of reports.

Categories

Report Types

Well, well, what do we have here? Another location where CoCoRaHS reports appear.

A left click on ANY part of the bold black title of the report should display the report.

Below is the same report in the CoCoRaHS database.

Report Date ▲	Station Number	State	County	Scale Bar	Categories	Description	View
8/6/2017	CT-FR-9	СТ	Fairfield	Near Normal	Water Supply And Quality	River flows recharged after 1" rain this weekend. Precip totals have been: 5.26" in the past 30 days. 8.17" in the past 60 days. 13.64" in the past 90 days. 27.00" in the past 180 days. The long term drought easing with 46.95" in the past 365 days.	Q,

While preparing this article, a few things learned to pass on to all of you.

- When submitting a Condition Monitoring Report, select a category "General Awareness", and only "General Awareness", and your Condition Monitoring Report will <u>not</u> appear in this Drought Impact Reporter. Pick an additional category. I usually say something about my nearby rivers and my precip totals so I select "General Awareness" and "Water and Quality". You may have something to say about "Agriculture" or "Plants and Wildlife". The point is to pick an additional category that best fits your report.
- Why some reports end up categorized under "County" and others are categorized under "City" is a quirk that NDMC is aware of.
- What NDMC is looking for in a report is <u>what has happened because of</u> the low precipitation, not the low precipitation in and of itself. Keep that in mind while typing your Report.
- Some recent examples of Reports that were placed under "Impacts"

Nurseries watering plants more often, creeks drying in Nash County, North Carolina

♦ ♦ ♦ ♦ ♦

Duration: 07-18-2017 - 07-18-2017

Affected Areas Nash County; Nashville

Description Grass is DRY. Public pools and ice cream shops are staying busy with locals and tourists this week to stay cool. Farmers have to water their crops throughout the day to stay moist. Nurseries have to water plants more than once to stay alive and sell. Creeks are starting to show signs of drying out with dry small spots in the creek. Tar River is low.

Warm lake water causing problems for trout fishing in Washington County, Tennessee▼

 $\Diamond \Diamond \Diamond$

Duration: 07-26-2017 - 07-26-2017

Affected Areas Washington County; Johnson City

Description We are actually more than 4 inches under normal for rainfall the past 2 months - and the period of June-July is drier than last year! Small trees and plants are wilting even near lakes. Lake levels still ok but water is warm and bad for trout fishing. Watauga Lake is warm and very cloudy green with extensive algae growth, not normal for this colder mountain lake.

If you have drought related pictures that you want to send to NDMC, the email address is DIRinfo@unl.edu, there is a form at http://droughtreporter.unl.edu/submitreport or tweet with #Drought17 A recent video explains more.

Before submitting a report, before the new work week begins, I will look at http://waterdata.usgs.gov and find a few area river gauges to see how nearby rivers are flowing *relative* to normal. There is one small nearby river I drive by and look at that *relative* to normal. I use the "Total Precip Summary" inquiry of our website and change the dates to get a 30, 60, 90, 180, and 365 day precip totals for my station. You remember what our normal precipitation amounts for our area, don't you? 4" per month, 12"-13" in 3 months and so on to 45"-50" for 12 months.

My attitude about Condition Monitoring Reports is "No automated tipping gauge at a nearby airport is going to be the sole source of precip totals for my area." "I can look at nearby rivers" "I can find horticulture easier than agriculture" "I measure and report every day. Here are my totals." With last year's drought behind us "If something made you look for drought conditions here, look elsewhere, they are not here." Some at that thinking will change if our precip totals change over time, but most of that thinking will not change.

Without drought conditions, and plenty of umbrella use for downpours, some may not feel the urge to submit a Condition Monitoring Report. The urgency is not there, however, you can get into the habit of looking at your conditions and putting together a detailed statement about them.

For years, observers have asked "Who looks at our reports?" Time and time again in these Monthly Newsletters, it has been mentioned with screen shots where your precip reports go, last month we mentioned where your monthly totals go, snow reports to NOHRSC, Significant Weather Reports and Hail Reports alarming forecaster's screens.

What do we have here? Another place where our CoCoRaHS reports appear. Another dimension has been added to our contribution as CoCoRaHS observers. The National Drought Mitigation Center can receive our Condition Monitoring Reports.

Wrap up

The upcoming celestial event that is all of the news is the total eclipse of the sun occurring on Monday August 21. Although New England is not in the path of a total eclipse, if sky conditions permit in the afternoon, we can experience about 65% of the sun being eclipsed by the moon. Links to animation for our states: CT MA RI Pay attention to your location within the state and the clock within this animation. It appears that the eclipse will begin after 130pm, reach its maximum around 245pm and return to normal by 400pm.

The first weekend in September is Labor Day Weekend, and Labor Day Weekend is our last <u>Field Photo</u> Weekend of the year. A chance to send a photo about your location instead of a report with numbers in them. Also a chance to find a place nearby to photograph the change in seasons.

The next WxTalk Webinar will probably occur on the same day our next Monthly Newsletter comes out. Thursday September 7 at 1pm eastern, the topic is very appropriate to our many miles of coastline and our exposure to tropical cyclones, coming at the climax of the season, titled **Storm Surge**, **Run From the Water**, **Hide from the Wind**, by Jamie Rhome, Storm Surge Specialist, at the National Hurricane Center in Coral Gables FL.

It is not too early to mention that September 30 will close our Water Year and Water Year Summaries will appear afterwards. Anytime over these next two months is a good time to look over your station reporting. We notice that this Newsletter is a good prompt to fill in missing reports.

Thank you for all that you do for CoCoRaHS, whether in the past, present and in the days to come.
