

Pat Kennedy

Pat Kennedy received degrees in Meteorology from the University of Utah (BS) and the University of Oklahoma (MS). He became the Facility Manager of the CHILL radar in Champaign, Illinois in 1988. (The radar was originally jointly developed by the University of Chicago and the University of Illinois; thus the CHILL name.) He continued in this capacity after the National Science Foundation (NSF) changed the radar's host institution to Colorado State University in 1990. One of his primary responsibilities is ensuring that the CSU-CHILL radar provides high quality data for users in both the scientific research and educational communities.
