## Practice Reading the Gauge

When reading the CoCoRaHS Rain Gauge, the inner cylinder has markings to the nearest $1 / 100^{\text {th }}$ of an inch, with a total capacity of 1 inch. While looking at the cylinder, notice the numbers: . 1, . $2, .3$, etc...
*Note: these numbers are in TENTHS of an inch*
Therefore, halfway up the tube, .5 is equal to $1 / 2$ inch.
Can you find $3 / 4$ of an inch? (.75)
How about $2 / 3$ of an inch? (.67)
Important Points:
When measuring liquid in a cylindrical container, you will notice a curved surface at the top of the liquid--This is called a meniscus. For an accurate reading, follow the bottom line of the meniscus for your measurement.

The Meniscus

It is also important to view the gauge at a straight-on eye level.
*Note, if you are using perfectly clean water and a clean inner tube, you may not see a meniscus at all. You may need to wait until you have rain water to be able to see the meniscus. **

Practice using the attached worksheet
$\qquad$
$\qquad$

Read the rain gauge to the nearest $1 / 100^{\text {th }}$ of an inch (Remember to read from the BOTTOM of the meniscus)
