

**Bring it on...
an avalanche of snow musings**

CoCoRaHS WxTalk Webinar Series

Dr. David A. Robinson
Distinguished Professor, Department of Geography
New Jersey State Climatologist
Rutgers University

December 14, 2023

Truckee, CA: 5 March 2023
(S. Mcafee)

Rutgers Global Snow Lab

Monitoring snow cover

Research on snow-climate interactions

The screenshot shows the Rutgers Global Snow Lab website. At the top is the logo 'gsl RUTGERS UNIVERSITY GLOBAL SNOW LAB' with a snowflake graphic. Below the logo is a navigation bar with links: 'home', 'publications', 'available data', and 'resources'. The main content area is divided into three columns: 'PRODUCTS', 'LATEST SNOW', and 'MONTHLY CHART'. The 'PRODUCTS' column lists 'Northern Hemisphere' with sub-sections for 'Visible Satellite Charts' (Daily, Weekly, Monthly, Monthly Departure, Monthly Climatology, Documentation), 'Graphs' (Snow Anomalies, Monthly Anomalies, Seasonal Extent), and 'Tabular' (Area of Snow Extent: Weekly, Monthly, Rankings, Download). The 'LATEST SNOW' column features a map for 'December 12, 2023' showing snow cover extent in orange and yellow, with text describing 'Yesterday's snow cover extent' and a link to 'Enhanced Weekly SCE'. The 'MONTHLY CHART' column features a map for 'November 2023' showing average snow cover extent in blue and yellow, with text describing 'Average snow cover extent' and a link to the '2022 Annual Report'.

snowcover.org

Why is snow so important to understand?

- It is a water reservoir
- It can influence weather and climate
- It can be dangerous
- It is important for wildlife
- It is fun to play in!

Skyline Bear Valley Ski Resort: March 2023

Did it snow because it is cold
or
is it cold because it snowed?

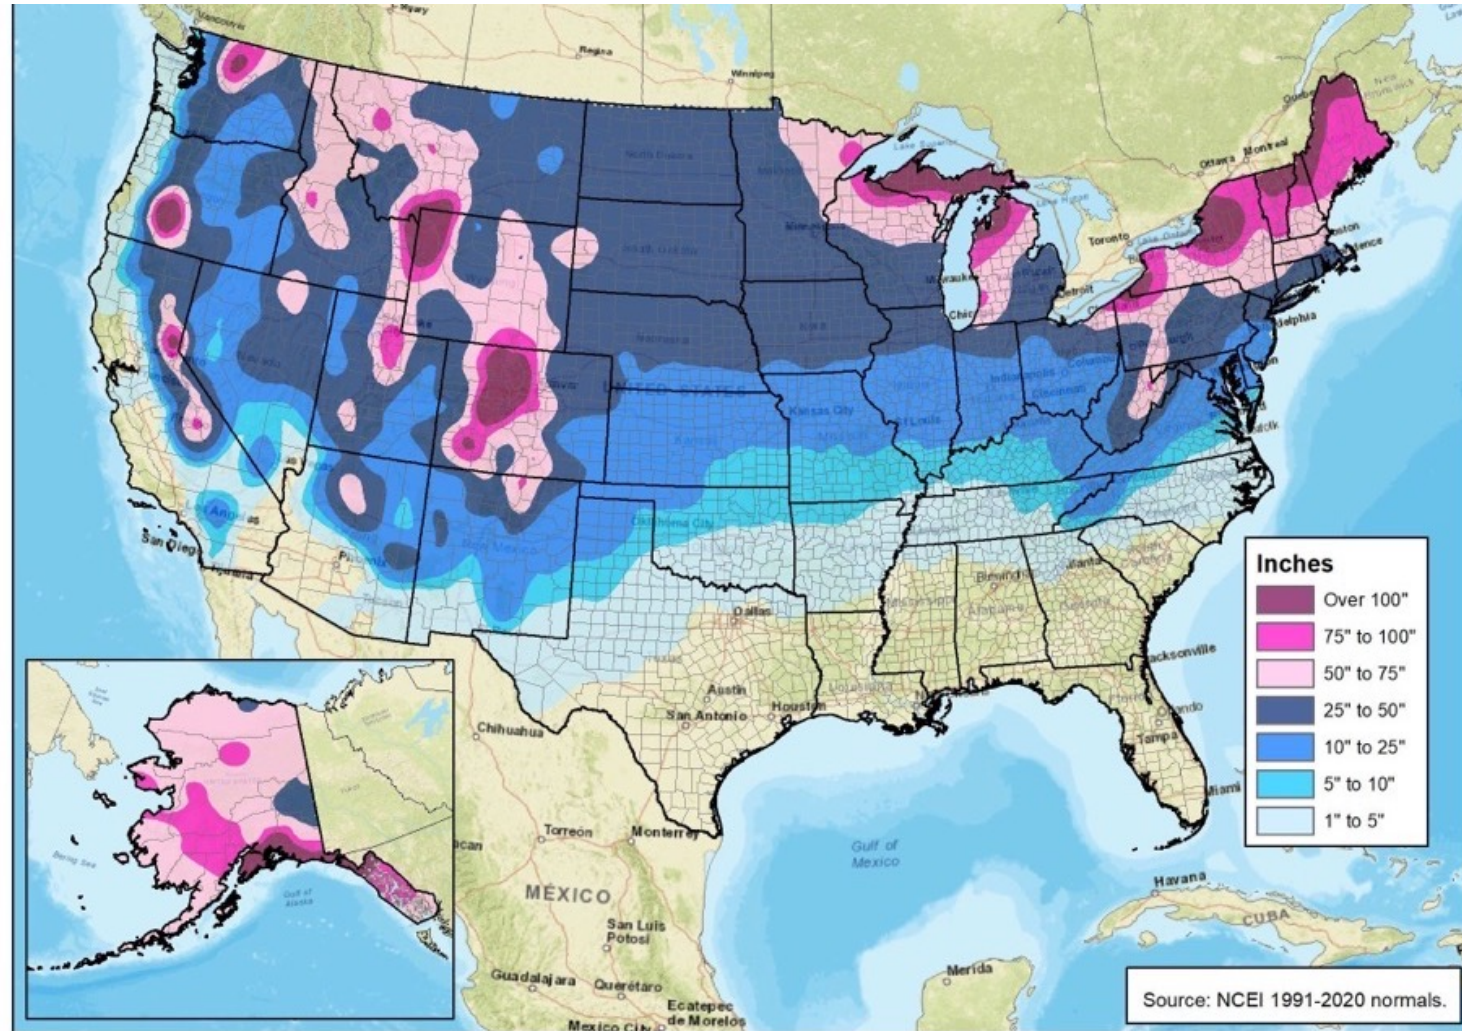

Did it snow because it is cold
or
is it cold because it snowed?

YES

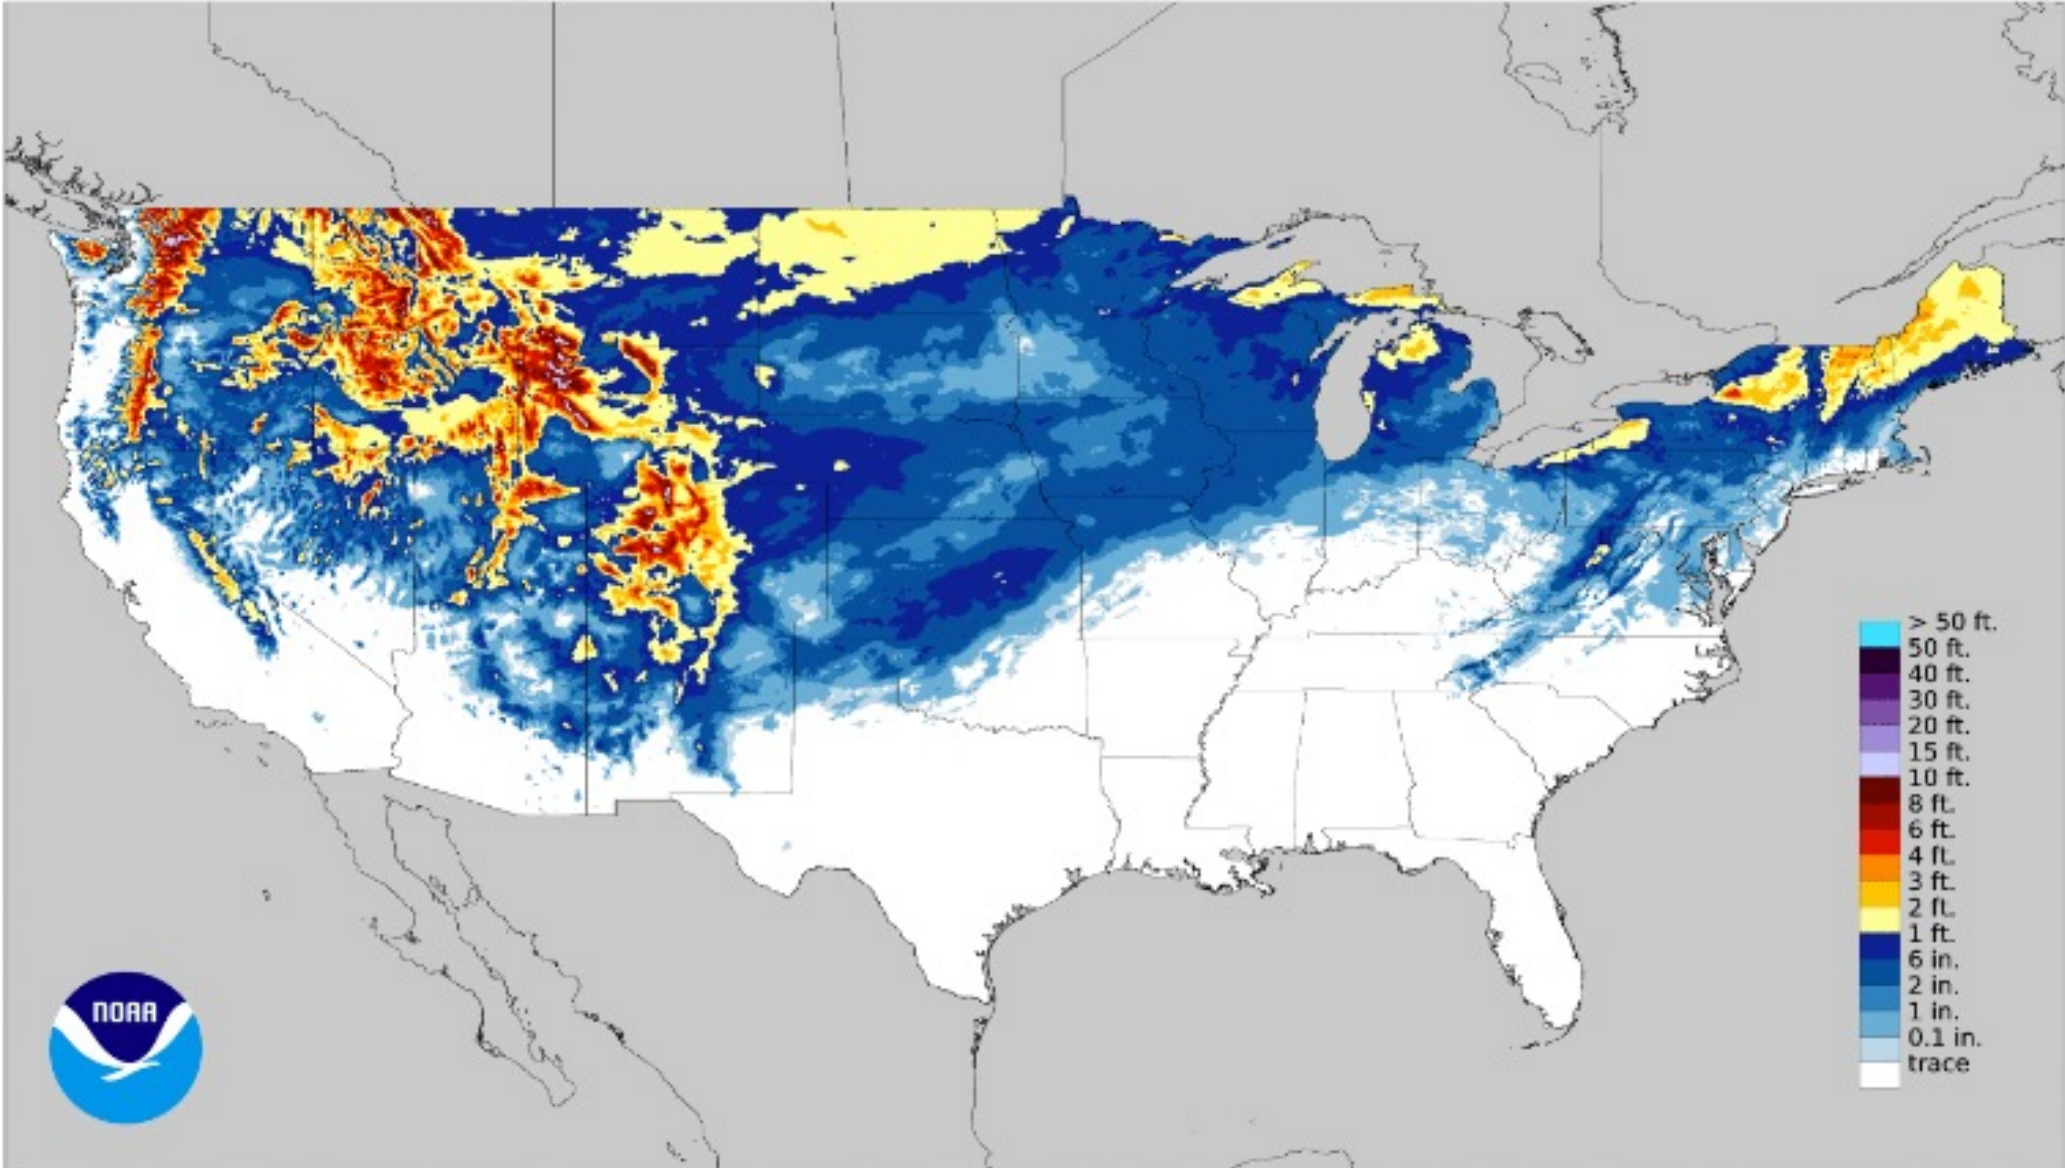

Snowfall

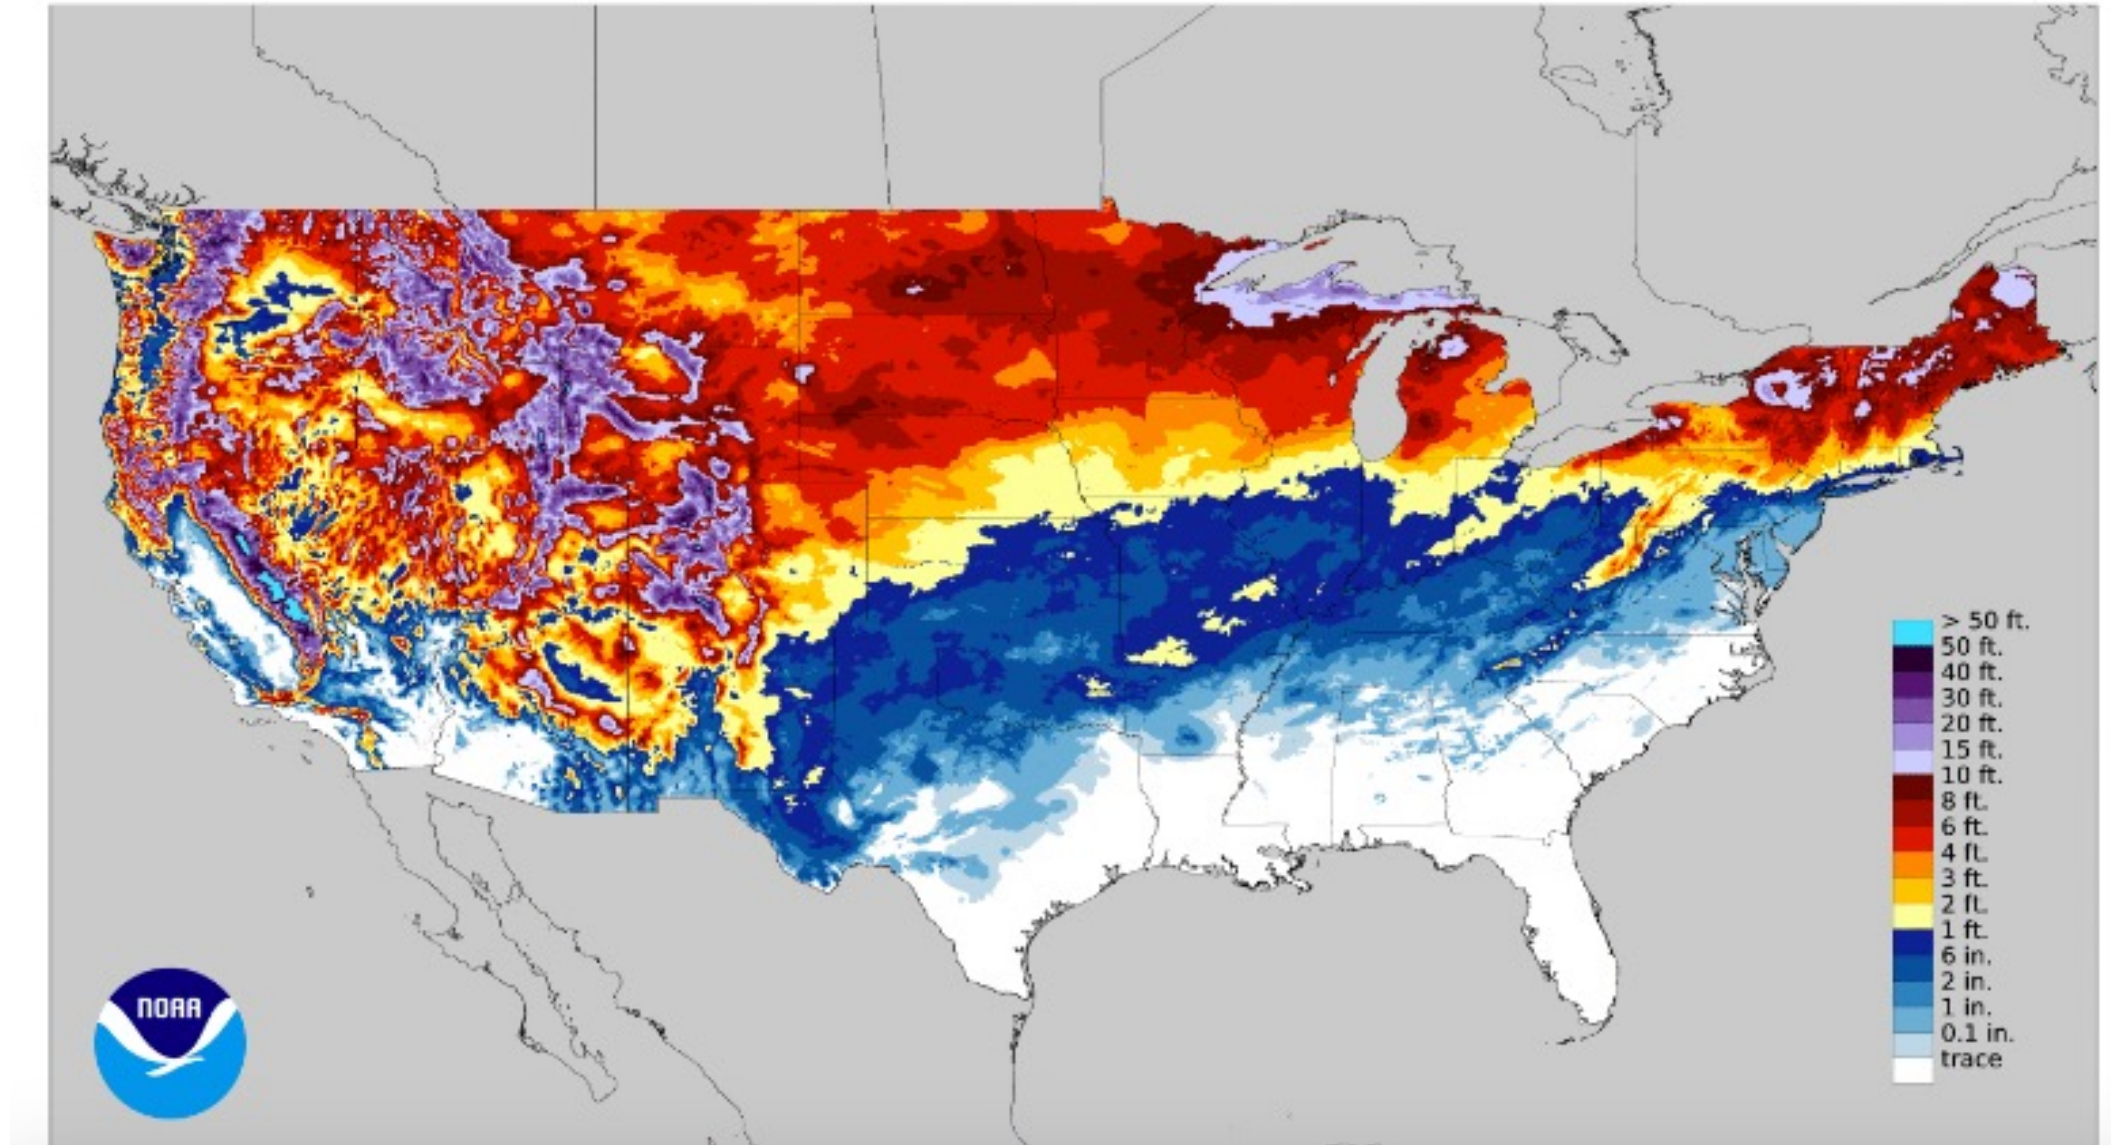

1991-2020 Normal Annual Snowfall (NCEI)

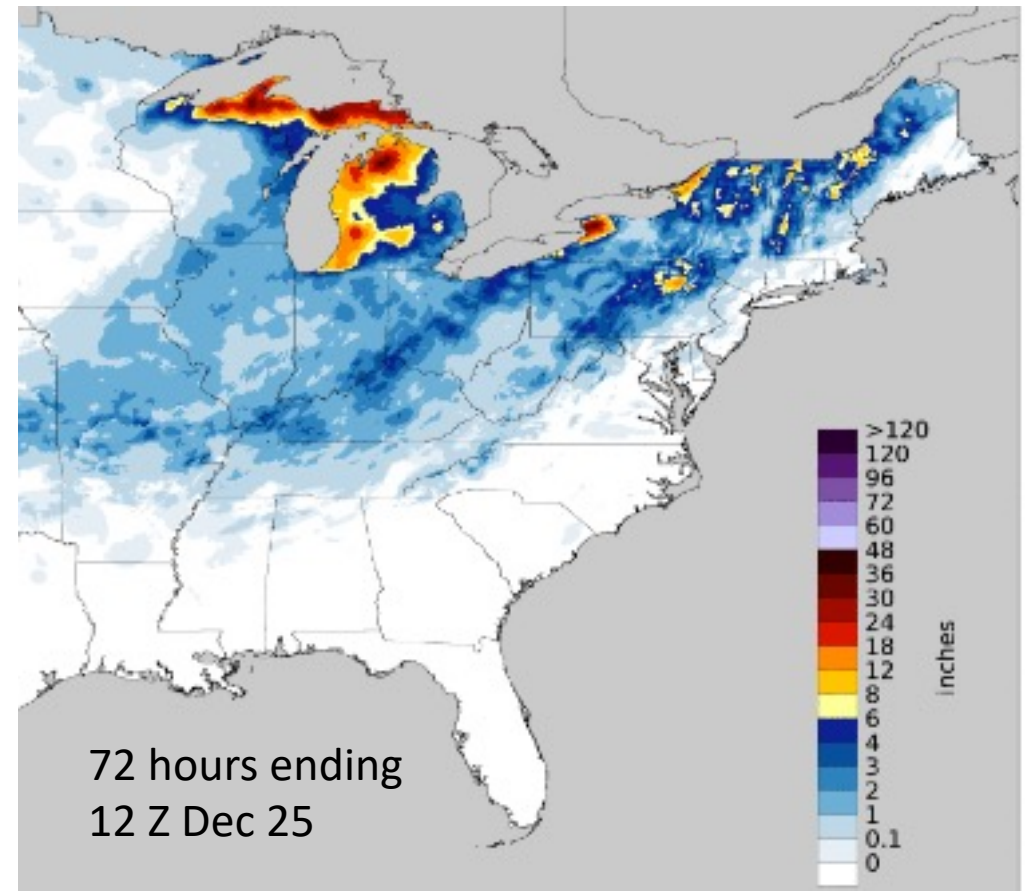

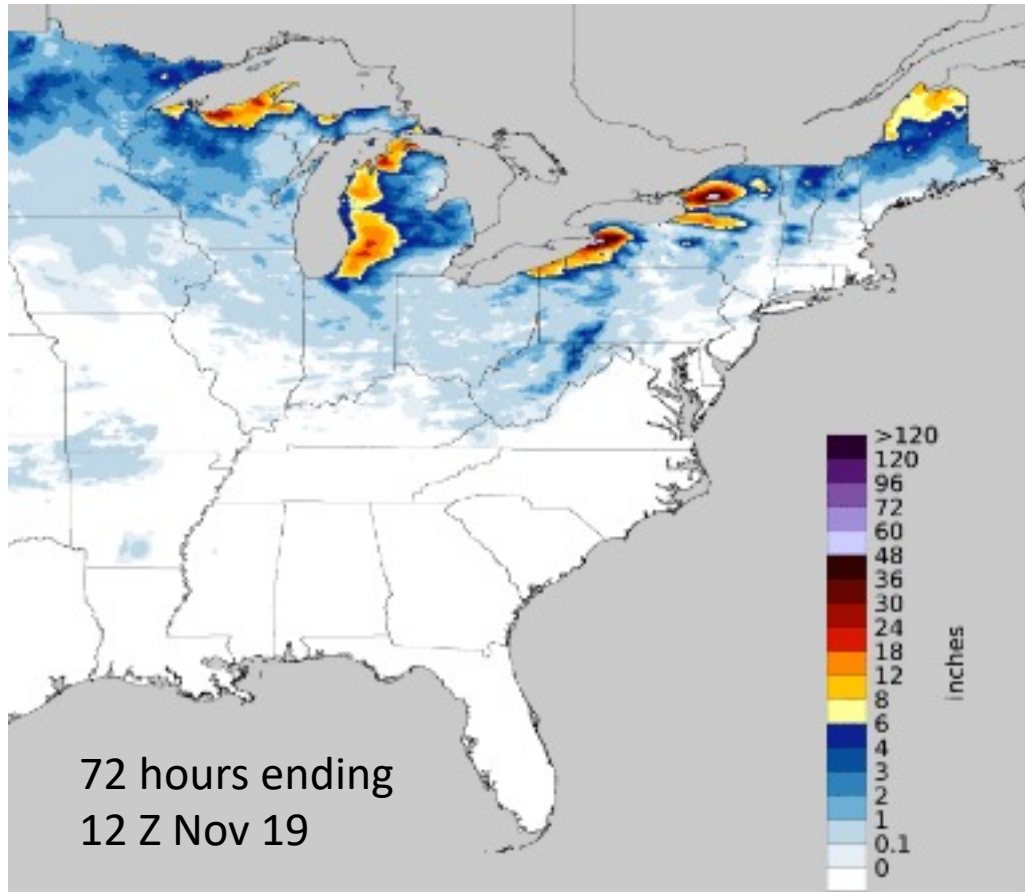

Seasonal Snowfall Accumulation: Sep 30, 2023 – Dec 12, 2023

Seasonal Snowfall Accumulation: October 1, 2022 – June 30, 2023

November & December 2022 lake-effect snow blitzes

Lake View, NY
19 November 2022

Snowfall this
El Nino
winter?

Snowfall during moderate-to-strong El Niño winters (Jan-Mar)

1959-2023 (detrended)
vs. 1991-2020 average

NOAA Climate.gov
Data: ERA5

Seasonal snowfall during all strong El Niños (yellow bars), strong El Niños without Greenland blocking (red bars), strong El Niños with frequent Greenland blocking (blue bars), compared to 1950-2023 average (gray bars) in four major Northeast cities along the Interstate 95 corridor.

Interior Northeast

Coastal Mid-Atlantic/Northeast

Same as the previous graph, but for interior Northeast cities from Pennsylvania to Maine.

As with financial investments, past snowfall during strong El Niños doesn't guarantee this winter's results. It will be fascinating to see how winter 2023-24 measures up.

Inland Northeast

IT'S NOT WORTH IT, ROY! LET'S JUST
GIVE HIM OUR NOSES & LET HIM GO!

Measuring Snow

Measuring Snow

- Snowfall measurement is typically more difficult than rainfall
- Snowfall measurement takes more time

Accurate and timely snowfall measurements can be extremely important to the local National Weather Service office, public works departments, media outlets, climatologists, and other scientists

Four Snow Measurements

1. The depth of new snow
2. Liquid water equivalent of new snow
3. The total depth of new snow and old snow and ice at observation time
4. Snow Water Equivalent (SWE) of total snow on the ground

Tools of the Trade

- Rain Gauge
- Snow board
 - A 24" x 16" piece of $\frac{1}{2}$ or $\frac{3}{4}$ " plywood painted white
- Yardstick or snow stick

Where to measure new snowfall

1. Find a nice, level place to measure where drifting or melting has not occurred (like a snowboard) and there are no trees overhead
2. Slide snow stick or ruler into snow until it reaches the ground/board surface
3. Read value on snow stick (value is always to nearest tenth of an inch, like 3.4 inches)

Measuring the Depth of New Snowfall

CoCoRaHS

Snow Network

When to Measure New Snow

- **Measure new snowfall as soon as possible after it ends, before settling and melting occur.**
- This often will not be at your regular observation time.

Snowfall 31 Jan-3 Feb 2021

Couldn't map it so closely without CoCoRaHS!

Contributed to successful NJOEM grant from FEMA to fund snow removal

Reports from 4 of NJ's 21 counties

Essex County

Bloomfield	20.5
Livingston Twp(CoCo)	17.5
Maplewood Twp(CoCo)	18.1
Montclair(CoCo)	17.7
Newark Airport(Coop)	18.2
North Caldwell	17.3
West Caldwell Twp(CoCo)	17.4

Gloucester County

Franklin Twp(CoCo)	9.5
Monroe Twp(CoCo)	6.4
Pitman(CoCo)	8.8
South Harrison Twp(CoCo)	6.8
Washington Twp(CoCo)	6.0-8.0 (two reports)
Wenonah(CoCo)	6.9
Westville	8.0
Williamstown	8.0
Woodbury(CoCo)	7.0

Hudson County

Harrison(CoCo,Coop)	17.5
Kearny(CoCo)	20.1
North Arlington	17.5

Hunterdon County

Clinton(CoCo)	16.0
Clinton Twp(CoCo)	18.5
Flemington(CoCo,Coop)	15.0-18.8 (five reports)
Franklin Twp(CoCo)	14.3
Frenchtown(CoCo)	16.0
Holland Twp(CoCo)	24.2
Kingwood Twp(CoCo)	19.0
Lebanon(CoCo)	15.0-17.0 (two reports)
Readington Twp	16.2
Wertsville(Coop)	18.0
White House Station	20.9

Liquid Water Equivalent of New Snow

- Two methods: Melt what falls in the gauge (as pictures show, not always best), or take a core sample

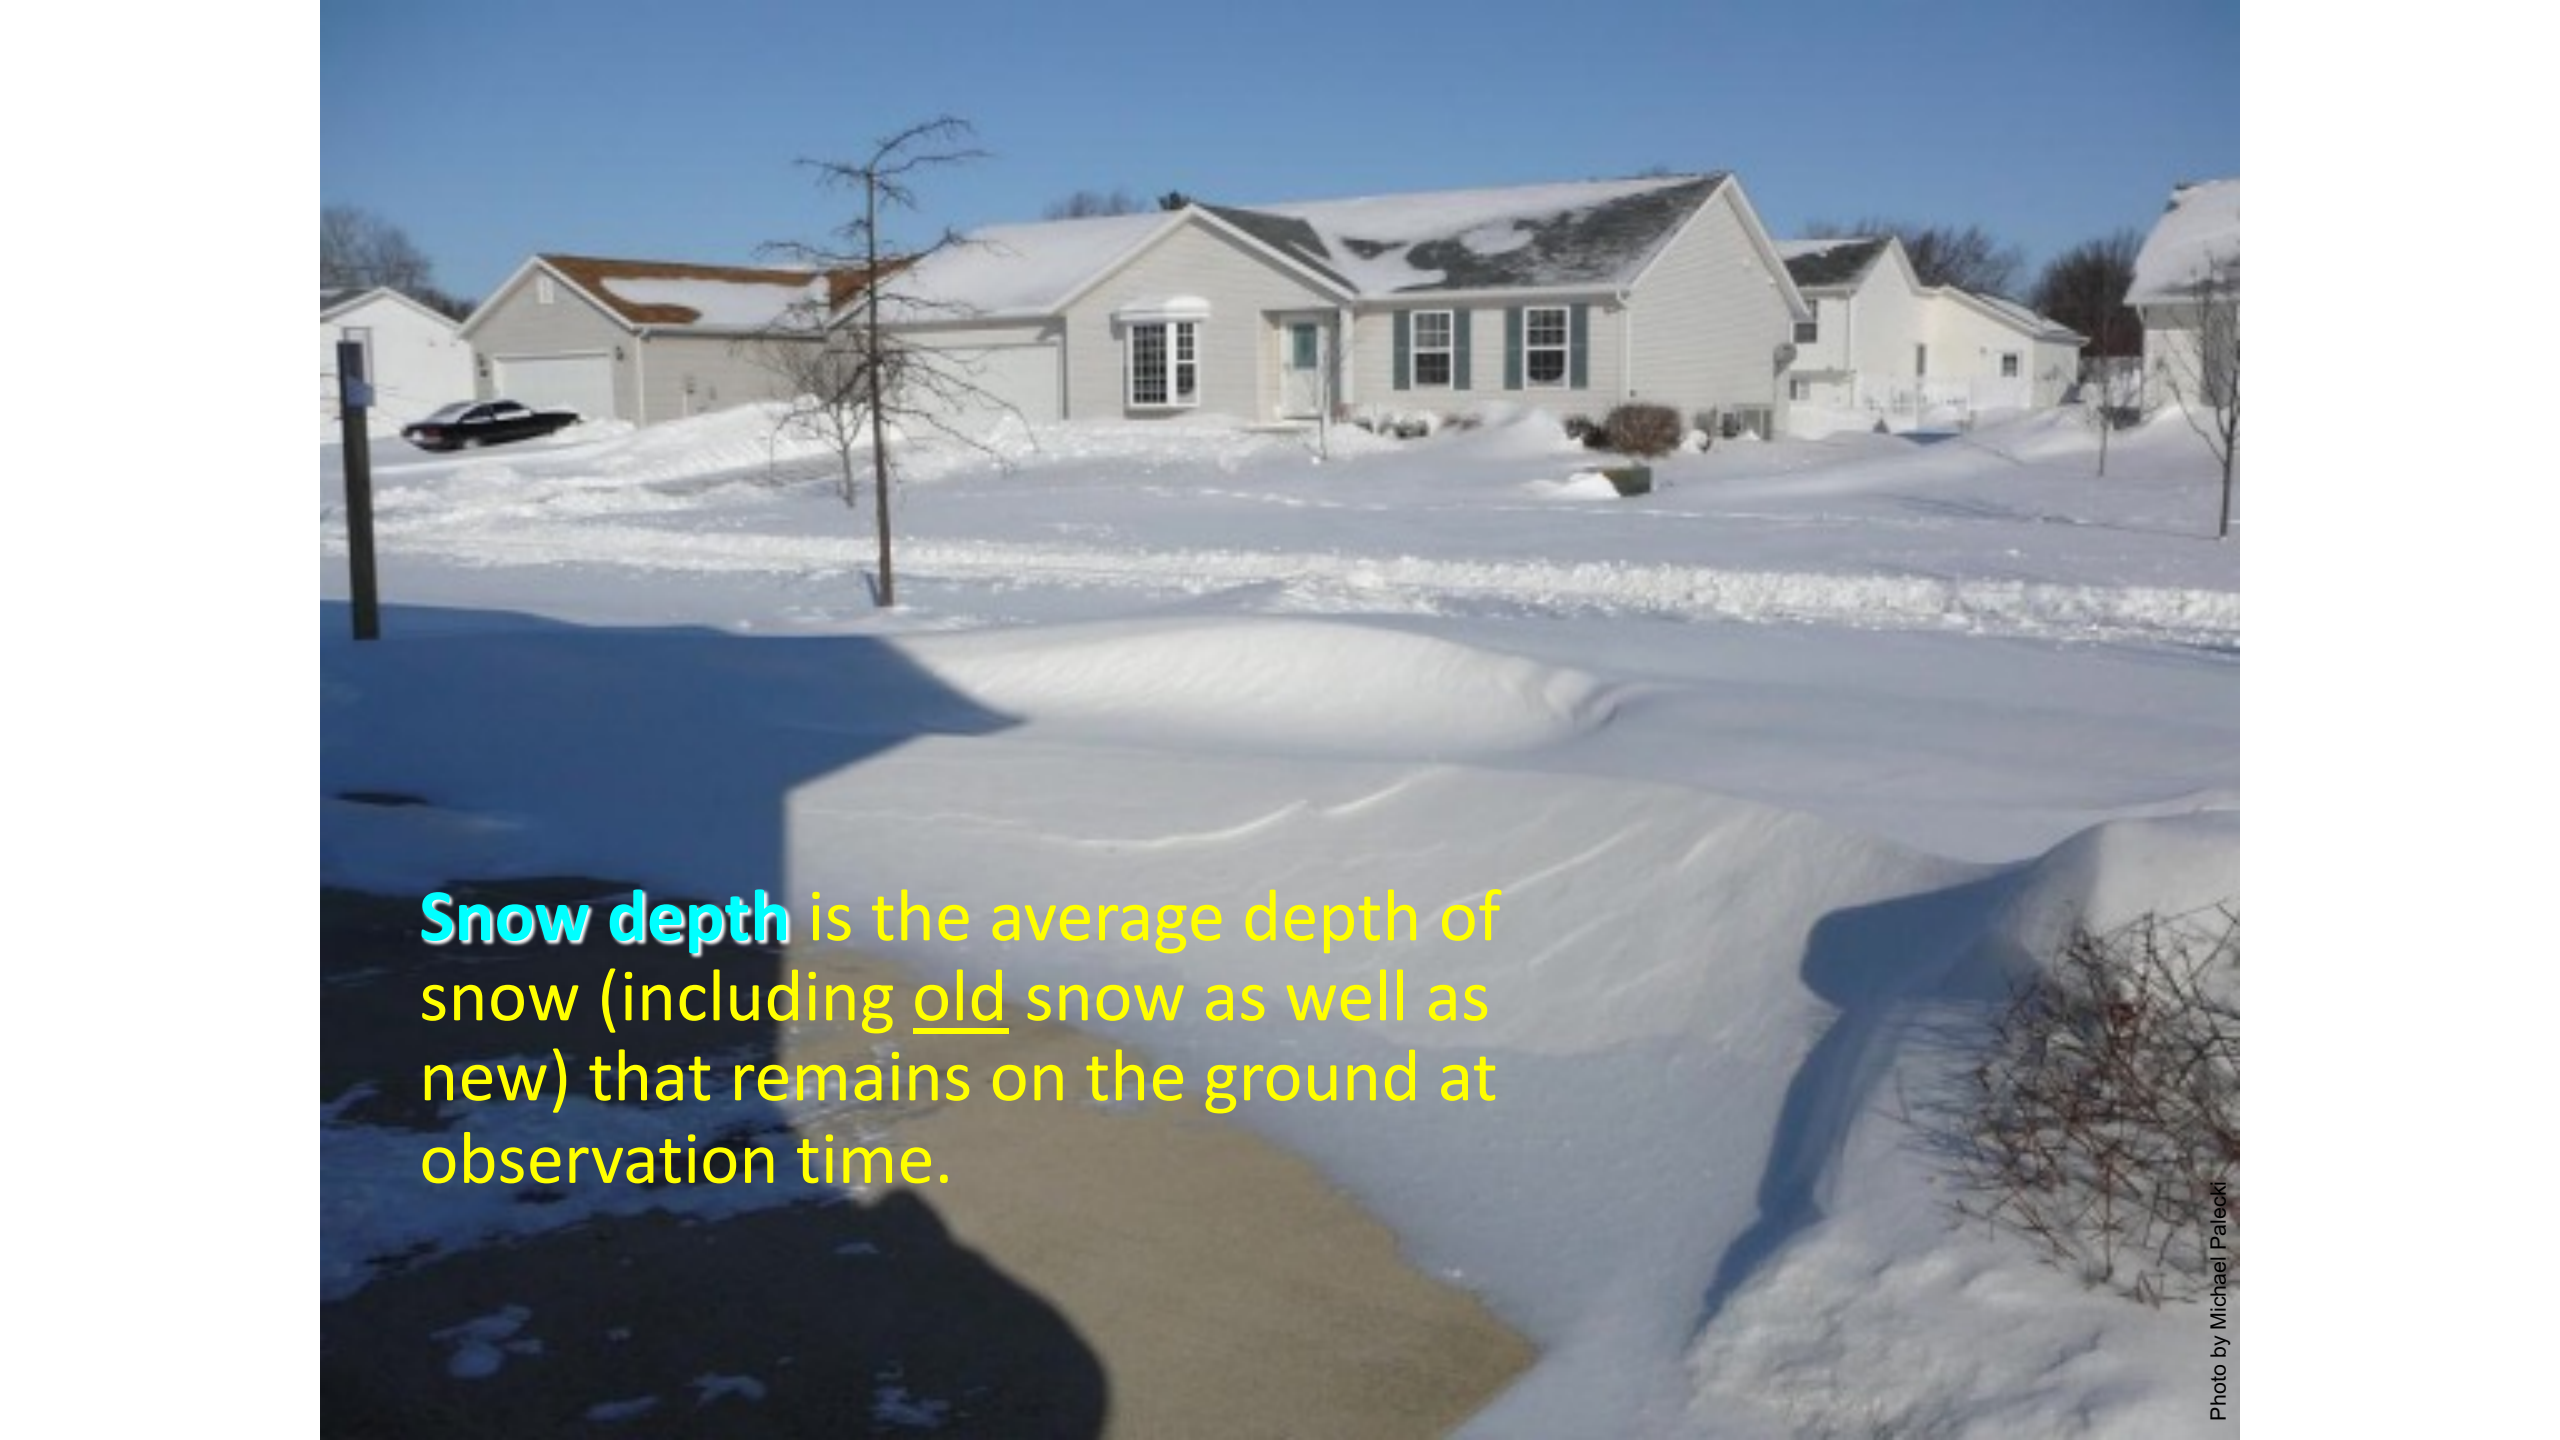

Taking a Snow Core of New Snow

- Capture a core by inverting the outer cylinder and pushing straight down into the snow
- Use something thin and sturdy to slide under the cylinder (aluminum flashing, spatula, snow swatter)

Measuring Total Snow on the Ground

- Snow is rarely uniform in coverage, so take several measurements and average them to obtain your total depth of snow.
- Slide snow stick through all layers of snow (new and old).
- Read value on snow stick and record (values are to the nearest $\frac{1}{2}$ " like 4.5 or 5.0).
- Don't measure "artificial accumulations", such as plowed piles, large drifts, or shoveled snow.

Snow depth is the average depth of snow (including old snow as well as new) that remains on the ground at observation time.

Snow on the ground

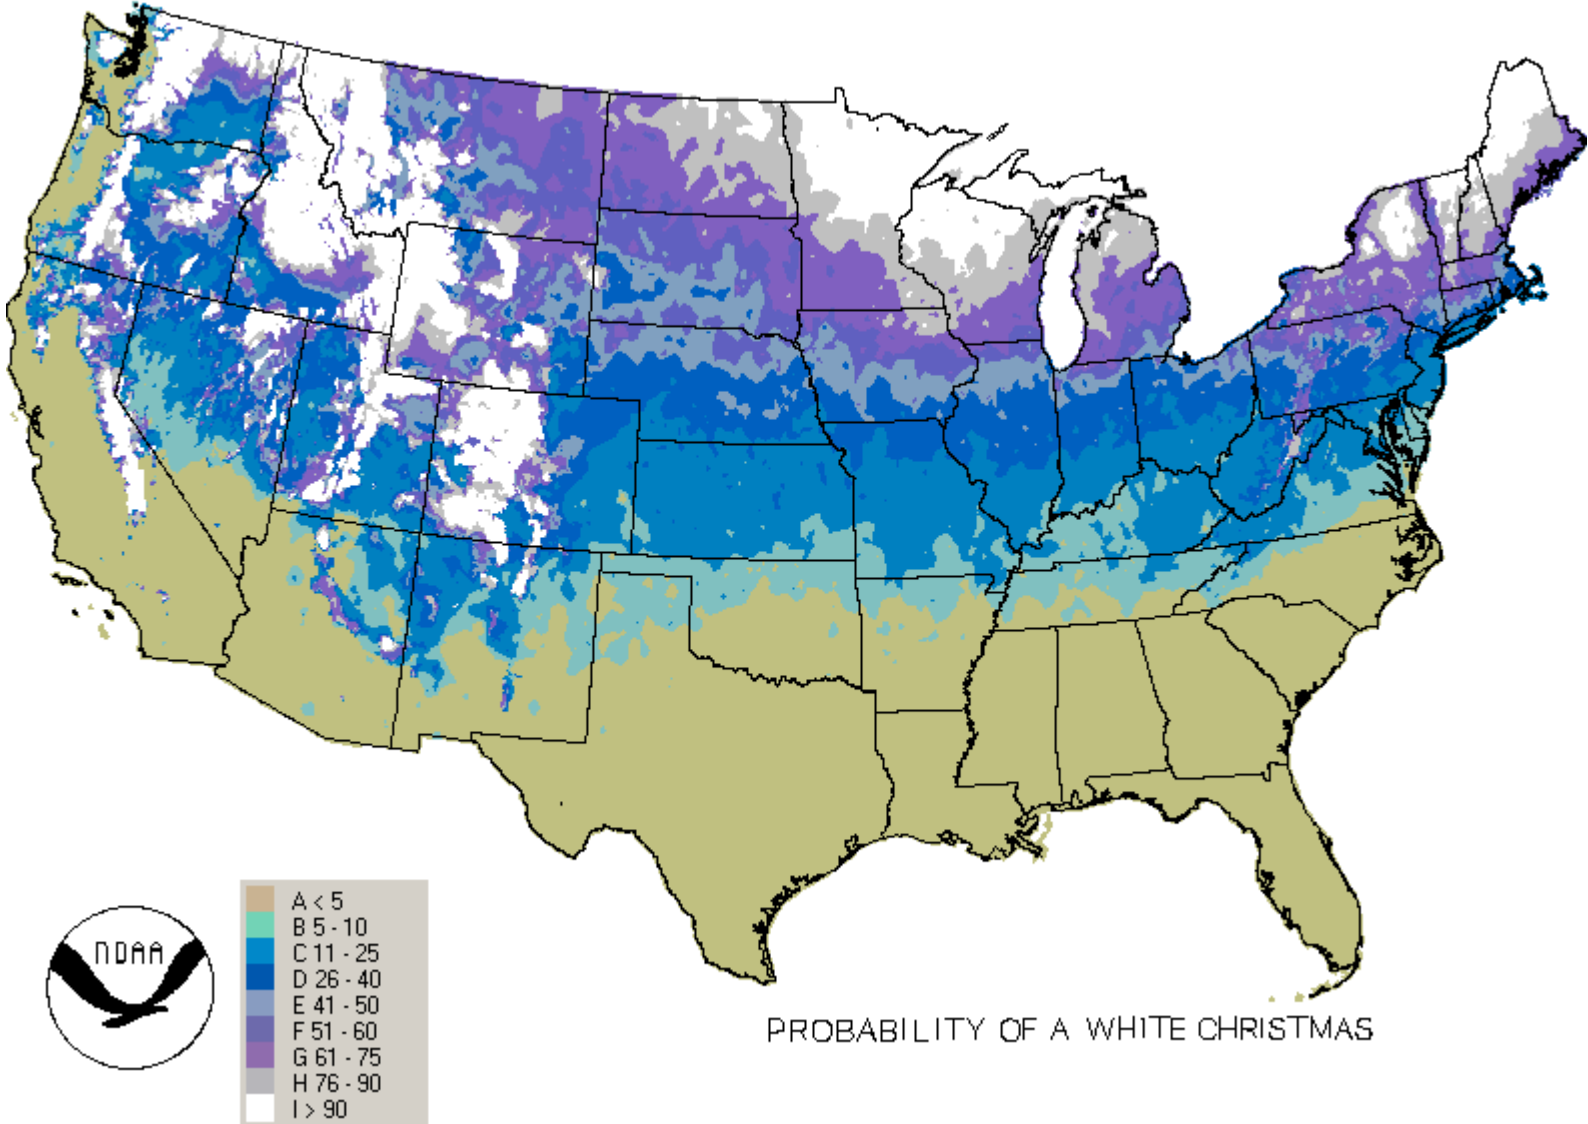

If half the ground has 2.0” and half the ground is bare, take an average and report 1.0” as your total depth

What is the snow depth?

A White Christmas this year?

Happy holidays,
and may all your
winters be white!
