

Eric Skillingstad

College of Earth, Oceanic, and Atmospheric Sciences
Oregon State University

I have always been interested in the weather and decided early on to pursue a career studying the atmosphere, starting here at Oregon State University as an undergraduate and continuing through graduate school at University of Wisconsin - Madison. After a 10 year stint working at Pacific NW National Lab doing research on the atmospheric boundary layer, I moved into a research/teaching professor position back at OSU, where I've been studying ocean-atmosphere interaction for the past 25 years.
